

# Usability Test Script

## Introduction

Hi, \_\_\_\_\_. My name is Savanna, and I'm going to be walking you through this session today. We're conducting usability tests to better evaluate how well our prototype empowers people to learn new vocabulary. The session should take approximately 10 - 15 minutes.

The first thing I want to make clear right away is that this is not a test. You can't do or say anything wrong here. You will be testing an incomplete prototype that likely has errors and mistakes - that's why we're testing it out! If you have any questions as we go along, just ask them.

OK, let's get started. I'm going to prompt you with five different scenarios in which you will complete a single task or a set of tasks using this Dr. Vocab prototype. As you attempt to complete the tasks I will be taking notes. First scenario...

## Scenario Tasks

1. You just heard about a new vocabulary learning app and you want to try it out. You download it and open it. Now create an account.
2. You don't have much time to use it at the moment. So you sign-out. And log-in at a later time.
3. You just heard a new word in class that you want to study later. Add the word to an existing deck.
4. You are commuting home and have some time to study. Complete a quiz.
5. You want to study a new category. Complete a search for a new deck and add it to your library.
